## **Project settings**

The settings of a project can be changed in *General settings* in the *View and check model* section of the *Modeling* window.

🖪 Modeling 📼 💷 📧			
Edit model files			
Geo-file	Receiver-file		
Project-file	Source-file		
View and check model			
Genera <mark>l setti</mark> ngs			
Geometry view/check			
Save and Run			
Interactive RT estimation			
TUCT prediction/auralization			
Aud. area mapping Ref RT			
Save CAG Save CAG and Run			

It is worthwhile to take a look at the three marked sections of the settings window:

Input folder:	C:\CATT-KU <mark>RS)</mark> Browse		
Output folder:	C:\CATT-KURS\OUT Browse		
Master GEO-file MASTER.GEO		Browse Edit	
Sound sources File: SRC.LOC Receivers	Browse Edit	Which to use	
File: REC.LOC	Browse Edit	Which to use	
Diffuse reflection Off Surface Surface + edge	Plane use All Not some Only some	Head direction Source Stage Fixed pos.	
✓ Surface default	Acoustic e	nvironment	

1 - Here one can change the path of the project's folder and the OUT folder, in which the simulations' results will be generated

2 - By using the Which to use one can choose the receivers and sound sources used in the simulation

3 - *Head direction* section describes the way in which the sound receivers are "turned":

- Source towards the source (only works for a single source!)
- Stage to the beginning of the coordinate system
- Fixed pos. towards a point with fixed coordinates

Furthermore, in *Acoustic environment* one can change the temperature, density, humidity, et cetera, of the air filling the model.

Changing the project's path to .\ and the output folder's to .\**OUT** might be a good idea – it allows for its successful loading regardless of where on the disc it has been placed.
